Let your voice work while you rest | Early access to voice cloning

Voice123 will soon allow its users to benefit from AI-powered voice cloning technology.

You have the chance to train your own AI voice model with Respeecher before the technology is available to others.

Why clone my voice?

You'll be able to let your voice model do a part of work for you - it can be used for auditions, text-to-speech conversions and even complete orders on its own while you rest, recover, or do other projects.

You only need to train your voice model once for a lifetime of results. No more lost opportunities!

Why work with Respeecher?

Respeecher is an **ethical voice cloning** technology that takes creative control, consent and compensation for voice talent seriously. It has been used for video games, TV series and movies that won the Academy Awards.

Respeecher **requires consent** for all voice replications and **moderates the content** they help generate, so you can be sure that your voice won't be stolen or misused.

Respeecher **strives for Hollywood quality**. Their Emmy-winning technology lets your voice convey any necessary emotion

Respeecher is already **trusted by professional voice actors** and celebrities around the world.

What options do you have?

Respeecher offers two packages:
● With the **Private** package, you train the voice model for **your own use only**.

You pay for a **monthly subscription** to use Respeecher's speech-to-speech and text-to-speech conversions. You own the converted audio and use it as you please.

As an early access user, you can be offered to train your AI voice model for free.

● with the **Public** package, you can **add your voice to library** of Respeecher Voice Marketplace.

Every time someone uses your voice in a project, you get a **revenue share**. There's **no monthly subscription** cost.

You don't need to pay for training your AI voice model if you opt for the Public package.

I'm up for it. How do I get started?

If you would like to get ahead of your competition with early access to AI voice model training by Respeecher, sign up with this form:
